Sewerage Works to affect Marcus Garvey Drive Traffic this weekend

With the thrust to continue in its effort to improve the collection and treatment of sewage in the Corporate Area, the National Water Commission (NWC) will be carrying out interconnection works on its sewer main along Marcus Garvey Drive on Saturday, February 12 and Sunday, February 13, 2011.

The utility company intends to connect the recently completed Tivoli Collector Sewer along Industrial Terrace to the existing Marcus Garvey Drive trunk sewer. This work will be carried out by Contractor, Champion Industrial Equipment & Supplies Limited in conjunction with the NWC's Wastewater and Engineering departments.

In order to ensure minimal delays for all concerned, the following road management strategies will be employed:

- The eastbound carriageway of Marcus Garvey Drive, from its intersection with Felix Fox Boulevard to the directional median opening in the vicinity of Petrojam Limited, will be closed to vehicular traffic;
- The corresponding section of the westbound carriageway will be converted to two-way traffic for the 2 days.

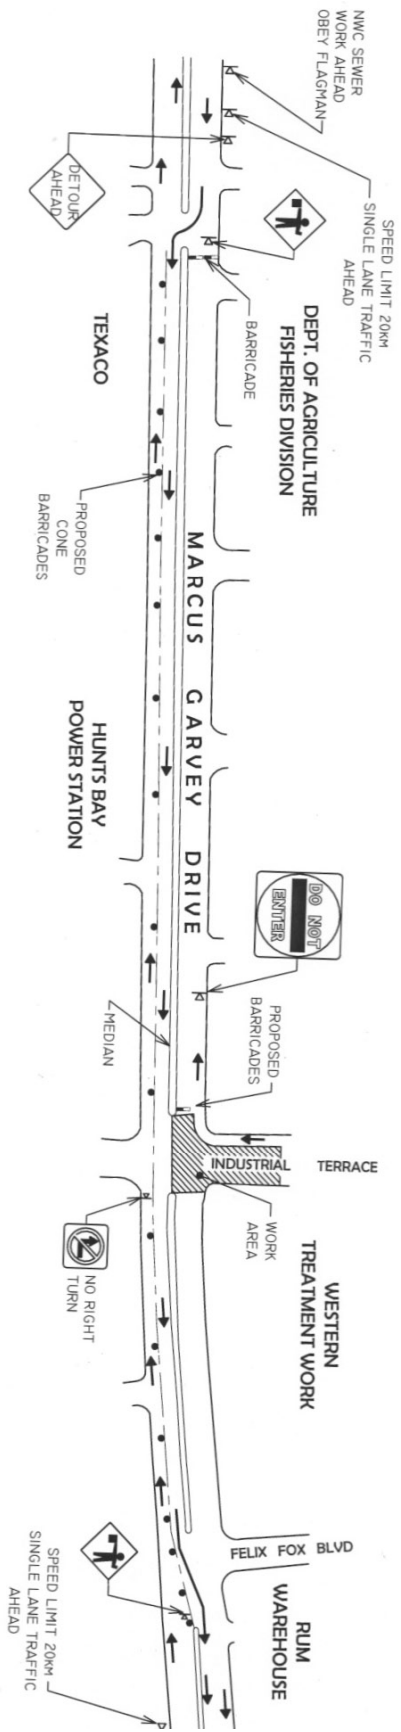

(more)

In this regard, the National Water Commission urges vehicular and pedestrian traffic to obey all signage and flag persons that will be appropriately placed to ensure the safety of everyone involved; or where possible to avoid the entire area of work.

The NWC apologises for any inconvenience that may be experienced while we carry out this necessary work and craves the understanding of the motoring public.
