**HIGH TURBIDITY AFFECTING WATER SUPPLY  
IN PORTLAND AND ST. MARY**

NWC customers in some **sections of Portland and St. Mary** are presently without their regular water supply, as a result of high turbidity being experienced at the **Windsor Castle, Hope Bay, Craig Mill, White River, Palmetto Grove, Rock Spring and Lucky Hill Treatment Facilities.**

The NWC is reminding customers that turbidity usually follows heavy rainfall and impacts the water treatment process.

The NWC regrets any inconvenience caused and is monitoring the situation in an effort to restore water supply as soon as these turbid conditions have subsided.
